PUNCHING CARRIAGES

Fahrer punching carriages

The Fahrer punching carriage revolutionizes the disposal of all kinds of punchings.

It is possible to pull out the underwagon from underneath the machine without external aid, to lift and to then remove it with a conventional fork lift truck. The emptying process into the container takes place without any dangers by simply releasing the dumping brake. This prevents a sudden weight distribution caused by a jerky emptying process.

Options:

- Varnishing in Ral shade
- Steering rollers with brake
- Design in V2A
